

## Burning Instructions - Maria Buytaert Candles

	<p>Never leave burning candles unattended.</p>		<p>Place burning candles at least 10 cm apart.</p>
	<p>Keep out of the reach of children or pets.</p>		<p>Always place candles on a fire-proof support.</p>
	<p>Keep burning candles away from inflammable objects.</p>		<p>Candles that stand in a draught may not burn down evenly. Do not let the candle stand in the sun as it may lose its shape or colour intensity.</p>
	<p>Keep the wick trimmed.</p>		<p>Caution</p>

You will have hours of enjoyment from your candles if you follow this advice:

- In order to get the best effect, let the candle burn for 3 to 4 hours after first lighting it.
- After 20 hours of burning, the rim will begin to open.
- Depending on the size, the candle burns 90 to 200 hours.
- Should the wax overflow, put out the flame and pinch the opening together in order to close it; when the wax is solid again, you may relight the candle.
